Portfolio: nondeletable.com

Languages: Russian (Native), German (B2 — Upper-Intermediate), English (A2 — Elementary)

SUMMARY

Python Software Engineer who takes products from idea to release: backend, interface, deployment and support. Author of ComfyLauncher, an open-source desktop launcher for ComfyUI with 50 GitHub stars, 560+ downloads and 6 releases. Builds local-first web apps (FastAPI, PostgreSQL), desktop tools and Telegram bots, and runs them on her own VPS (Docker, Traefik). Open-source contributor (GTG / GNOME). Brings 9 years of operations and team-lead experience from logistics.

SKILLS & TECHNOLOGIES

- **Languages:** Python, SQL, Bash
- **Backend:** FastAPI, Flask, Jinja2, REST API, asyncio, APScheduler, pytest
- **Frontend & Desktop:** HTML/CSS, PWA, PyQt6, Flet
- **Databases:** PostgreSQL, SQLite
- **DevOps & Tools:** Docker, Docker Compose, Traefik, nginx, gunicorn, Linux/VPS, systemd, Git
- **Bots & Integrations:** Telegram Bot API (python-telegram-bot, aiogram), requests/BeautifulSoup, Pillow
- **AI-Assisted Frontend:** JavaScript/TypeScript, SvelteKit, TailwindCSS, Electron (built with AI coding agents)
- **AI Tooling:** ComfyUI, Ollama, Claude Code, ChatGPT

WORK EXPERIENCE

Python Developer

Freelance | *Jun 2026 – Present*

- Built Ko-ko Money, a local-first budget tracker PWA, solo and end to end: frontend with full offline mode (IndexedDB), FastAPI + PostgreSQL backend for auth, two-factor authentication (TOTP) and cross-device sync, Docker deployment on a VPS.
- Multi-currency accounts with live exchange rates, budgets and limits, analytics charts, validated JSON backup and restore.
- Telegram bots for clients: a calculation-service bot with input validation and auto-correction, result cards rendered as images (Pillow), payments with an admin flow, purchase history in SQLite.

Developer

StellarTech (contract) | *Apr 2026 – Jun 2026*

- Built a JavaScript engine for visual-novel games from scratch: dialogue sequencing and branching, scene transitions, visual and sound effects, gameplay mechanics. The team used it to ship games.
- Planned the full production cycle of an educational game: script, AI-generated art, audio, mechanics.
- Testing, bug fixing and server deployment.

Python Software Engineer

Freelance (ComfyLauncher) | *Sep 2025 – Apr 2026*

- Designed and built a Windows desktop launcher for ComfyUI as the sole developer: modular architecture, external-process lifecycle management, CPU/GPU launch modes, WebView2-embedded UI.
- Made it work out of the box: automatic checks of system components and versions, handling of Windows configuration conflicts and antivirus blocks, logging and diagnostics.
- Shipped 6 releases (50 GitHub stars, 560+ downloads); resolve every user bug report and evolve the product from feedback.

Fullstack Developer

Agrotek LLC | *Apr 2025 – Sep 2025*

- Designed and built agtparts.ru, a wholesale parts catalog on Flask + PostgreSQL: filtered search, customer accounts, request cart, admin panel, blog and newsletter.
- Deployed with domain and SSL; maintaining and extending it since launch.

Head of Customer Service

KIT Transport Company LLC | *Apr 2015 – Jan 2024*

- Grew from customer service specialist to head of department in under 4 years; led a team of 12 and supervised customer service across 30 branches (80 people).
- Ran hiring, onboarding and training; owned service-quality reporting; rolled out new regulations across the division.

OPEN SOURCE

- **GTG (GNOME)** — merged fix: the task editor no longer traps the Tab key (PR #1379).
- **Amical** — PR in review: minimizing the main window on Windows hides it to the tray (PR #188).
